RAGHU | POLICY DOCUMENTS AND RETRIEVAL

Meeting purpose

Monday maps the supplied policy documents and the existing knowledge layer. Tuesday verifies extraction and retrieval, including source attribution. Show that answers can be traced to the supplied material.

Suggested meeting script

"I mapped the supplied policy PDFs to the existing extraction and search code. The knowledge layer extracts text, splits it into passages, stores document metadata in the vector index, and retrieves source-linked text. I checked that the result identifies its source and that category code content stays scoped to the relevant question."

What to explain and show

- Why: policy answers need traceable source passages, not unsupported general answers or passages from the wrong document.
- What: PDF extraction, chunk splitting, vector indexing, code reading, and retrieval tools; identify changed source files, if any.
- How: rebuild the index, run a retrieval query, and show the passage, document name, chunk ID, and distance.

Inputs -> outputs

Inputs: 16 supplied PDFs in Project/data/docs/.
Outputs: extracted text, sections/chunks with source metadata, and the local Chroma vector index under Project/database/chroma_store/.

Document files

Advertising-Clearance-Policy.pdf; Code-Alcohol.pdf; Code-Betting-And-Gaming.pdf; Code-Consumer-Credit.pdf; Code-Less-Healthy-Food.pdf; Code-Medicines-And-Health.pdf; Guide-Alcohol-And-Social-Success.pdf; Guide-Appeal-To-Under-18s.pdf; Guide-Comparative-Claims.pdf; Guide-Environmental-Claims.pdf; Guide-Financial-Promotions.pdf; Guide-Gambling-Inducements.pdf; Guide-Health-Claims.pdf; Guide-Price-And-Offer-Claims.pdf; Past-Clearances-Casebook.pdf; Scheduling-And-Audience-Rules.pdf.

FILES AND DEMO

Code files

Project/knowledge/chunk_splitting.py
Project/knowledge/code_reading.py
Project/knowledge/pdf_extraction.py
Project/knowledge/vector_index.py
Project/tools/retrieval_tools.py
Project/run_knowledge_indexing.py

Run from Project in PowerShell

Rebuild the index when needed:

```
python run_knowledge_indexing.py
Get-ChildItem database\chroma_store
```

Then run a retrieval query through the existing tool or chat flow.
Show passage text, source document, chunk ID, and distance. Avoid copying PDFs to another location; use the supplied source folder.

What counts as a useful result

A clear query returns relevant passage text and names the document it came from. A category-code question should retrieve the correct code document. Explain any excluded-document rule in the current design.

Meeting close

Summarize the baseline, any retrieval gap found, and the evidence from the query. Tuesday's output is a verified source-linked retrieval path.
